One can obtain stock firmware for Lenovo K1, Lenovo K2, Lenovo K3, Lenovo K4 and .t exist a significantly different yet useful temperature regimes that could be measured through experiments with the angular momentum of thermal photons to gain further insight into the quantum-to-classical transition and the quantum entropy production in any thermal environment. The nonequilibrium processes associated to the angular momentum of thermal photons, the effects of anharmonic potential, phase space contour, and even parametric resonance, are left for future investigation. We believe that the phenomena presented in this work can be observed in laboratory measurements of the angular momentum of thermal photons and that they can in general shed new light on the quantum-to-classical transition, quantum entropies, and quantum-to-classical time evolution transition.
