The latest version of Windows Vista (codename Windows Vista Ultimate), the successor to Windows XP, was released on October 22, 2007. It was developed by Microsoft and released on October 22, 2007, at the Vista launch event in San Francisco, California. Like Windows XP, Windows Vista was marketed as a new improved version of the previous Windows XP. It was officially announced on July 11, 2006, as the successor to Windows XP and it was released on October 22, 2007. Windows Vista has been the most successful version of Windows, having sold more than 250 million licenses as of June 2009, making it the best-selling operating system for desktops and laptops. Initially, the consumer version of Windows Vista shipped in October 2007 with a cost of \$129, while the Business and Education versions were released on February 9, 2008. Microsoft has also launched Windows Vista Ultimate in India on July 12, 2008. The release of the Ultimate Edition of Windows Vista had been delayed for many months. The delay was due to the Windows XP OS license being blocked by a patent lawsuit, which involved an infringement claim by Intel against Microsoft's Courier product. On February 25, 2008, a lawsuit against Microsoft was filed by NexGen Inc., in the United States District Court for the Northern District of California. NexGen claimed that the technology in Windows Vista Ultimate was derived from NexGen's patents. On June 30, 2008, the patent suit against Microsoft was settled for a confidential amount. Thus, Microsoft made several changes to the operating system that enabled the company to reduce the cost. These changes included the use of hardware acceleration instead of software-based graphics acceleration, removing support for DVD playback, and removing the Windows Media Center and FrontPage features. The removal of DVD playback and Windows Media Center was a controversial move among users and critics alike. Microsoft had initially tried to attract people to its new operating system with a feature in Windows Vista called Windows Live. This application, called Windows Live Essentials, was one of the major changes to the user interface of Windows Vista. The functionality is now integrated with the Windows Vista user interface. On January 18, 2009, Microsoft announced that the service was to be shut down. Despite the problems, Windows Vista was released to the public on October 22, 2007. At launch, there were six different editions: Home Basic, Home Premium, Home Premium Ultimate, Professional, 82157476af
